As Project Controller, you will become a key member of the project team within wind energy and work directly with the project manager as support on all financial aspects of the project – from validation of tender calculation, monitoring of financial statements to financial benchmarking. You will work with large projects with significant contract value.

Your working day
With reference to the Senior Project Controller, you will drive and support the monthly rolling budget process, investigate deviations to budget, secure accurate cash flow forecasting, and handle project specific payment applications and invoicing. In order to efficiently handle these responsibilities, you must possess insight into business processes, cost budgeting and estimating, accounting processes, risk analysis and change control.

You will be part of the central finance organisation, but will work across the finance and project organisations.

Main tasks
- Monitoring cost and commitment through purchase order and invoice review
- Analyse monthly financial performance using percentage of completion methodology
- Monitor status on contractual variation orders against suppliers and customers
- Serve as primary financial support personnel for Project Managers as well as intermediary between the project and the finance department
- Provide management reporting to the executive management team and board of directors
- Carry out project reviews (target/actual comparison and assessment of impact on profit)
- Handle project specific payment application and invoicing procedures
- Perform ad hoc reporting to analyse financial trends and support decision making
- Serve as primary financial support personnel for Project Managers as well as intermediary between the project and the finance department
- Provide management reporting to the executive management team and board of directors
- Carry out project reviews (target/actual comparison and assessment of impact on profit)
- Handle project specific payment application and invoicing procedures
- Perform ad hoc reporting to analyse financial trends and support decision making

About You
Ideally, you have 2-3 years of experience as project/business controller, preferably from international project organisation. Experience from within the wind industry or from the construction world will be an advantage. However, another relevant controlling background could also be an entry point into the position.

You work in a structured and pragmatic way and have very good analytical and communication skills.

Professional requirements
- Bachelor’s degree in finance or accounting, preferably in management accounting
- Experience in management accounting for operational projects as well as in implementing commercial and business processes
- Sound knowledge of any Microsoft Office application and advanced knowledge of Excel. Experience with Microsoft Dynamics Navision ERP solutions is a plus
- Excellent English writing and verbal skills

Our values are your values
The projects we are involved in require time, precision and quality and these are the values that make up the bearing foundation of our workday. You should be able to see yourself in our uncompromising attitude to client satisfaction, consciousness of quality and honesty.

We offer
- An exciting and versatile job in an international company
- Possibility for professional and personal development
- An organization with a flat structure and freedom with responsibility
- A good working environment in a team with a free and informal tone
- Salaries are negotiated individually at a competitive level

Application
Please send your application and resume marked “Project Controller” to job@bladt.dk no later than 18 October 2015.
