

Offshore Foundations

Samsø & Egmond aan Zee

Bladt Industries' core business lies within the construction of complex steel structures, and the company has, since 1999, been a part of the wind power industry.

With a high rolling capacity, Bladt is an attractive company for the wind industry. From start to finish the keyword at Bladt Industries A/S is co-ordination, with particular attention to high quality.

Samsø Offshore Windfarm

In April 2002 Bladt Industries A/S received its first order for the fabrication of ten offshore monopiles and transition pieces. The ten monopile foundations were fabricated during the summer and autumn of 2002 at Bladt Industries A/S's facilities in Denmark.

Egmond aan Zee

Again, in August 2005, Bladt Industries A/S received a large order for 36 offshore foundations and transition pieces for the Dutch project "Egmond aan Zee". It took less than 11 months from the signing of the contract until the last pile was delivered in the Netherlands.

Total tonnage for the Egmond aan Zee project was nearly 14,000 tonnes. The foundations and transition pieces had a diameter of 4.5 metres and a total length of 70 metres.

Through this project Bladt Industries A/S has gained even more experience in the fabrication of foundations and transition pieces making Bladt Industries A/S even stronger for future projects.
