

On-shore Piping Work

Bladt Industries A/S has gained considerable competence within services for the on-shore oil and gas production. The competence is gained through performing a great number of complex pipe installation projects.

We deliver turnkey solutions including on-site erection. Our services are carried out on refineries, oil and gas production plants, power stations and gas storage facilities. We supply pipe installations for water, gas and chemical products. In our solutions all valves, pumps and E&I equipment are included.

Prefabrication is carried out at our facilities in Aalborg or on-site. Our erection teams perform both dismantling of old installations and erection of new installations.

Project examples are turnkey deliveries of withdrawal train for natural gas storage, erection of pipe installations in piperack, turn key delivery of lye plant, tie-in work, bridges and spools. Furthermore, we take part in shut-downs and turn-arounds. Clients are oil and gas companies (Statoil (in Norway and Denmark) and DONG) and

various refineries, power stations and chemical plants.

During the years Bladt Industries A/S has established a well-documented reputation for carrying out complex piping projects of the highest quality and on time.
