

Mærsk Building

Gangway bridge

www.bladt.dk

CLIENT

Danish Building and Property Agency

CONTRACT TYPE

Prime contract

TIME FRAME

2014-2016

LOCATION

Copenhagen, Denmark

Project description

Bladt Industries has delivered a bridge for a giant building work in Copenhagen, Denmark. The bridge spans across new build and landscape connecting the entire area. Bladt was responsible for the fabrication and installation of the gangway bridge for the Mærsk Building including ramps, glass coverage, safety fences in the landscape and on the bridge, as well as lightning on the bridge.

The bridge consists of 16 steel sections and two concrete ramps installed one by one and welded together on site. All bridge sections have been successfully installed at an active construction site in consideration of cranes, materials and other ongoing projects.

The bridge sections were installed at night so that traffic and other inconveniences were reduced. The bridge weighs 264 tons and is 335 metres long.

FACTS

- Weight: 264 tons
- Length: 336 meter
- Connection between buildings
- 16 bridge sections
