Indoor walkway in Terminal 3, Copenhagen Airport

CUSTOMER

Københavns Lufthavne A/S

FORM OF CONTRACT

General contract

PERIOD

2017-2018

LOCATION

Copenhagen, Denmark

Project description

As part of the rebuilding and expansion of Terminal 3, Bladt Industries won the order for production and assembly of the upcoming longest indoor walkway in Denmark.

The bridge is at first floor height and is a complicated construction built in three stages carried by existing pillars. Bladt also stands for accommodation, glass, ceilings, sprinkler systems and electrical installations.

Terminal 3 is a busy area with millions of travelers annually, which is why the project is with great consideration for both travelers and airpor

With the new walkway, it is possible for

travelers to get directly from the metro and continue over the bridge to the security check and SAS fast track. This will release a lot of space on the busy terminal floor.
