## **Bladt Industries secures another jacket-order**

*Serial fabrication of jacket foundations continues at Bladt Industries' facilities. Iberdrola has selected Bladt Industries A/S for the upcoming Wiking Offshore Wind Farm situated in the German part of the Baltic Sea.*

Iberdrola and Bladt Industries have signed a contract for the fabrication of 41 jacket foundations and 164 pin piles. Based on this new order, Bladt Industries will continue the serial fabrication at the Lindø facilities in Denmark.

*"We are very pleased that we can continue serial fabrication of foundations at our facilities and hereby build on our strong track record from previous jacket foundation fabrication" says Jan Kjærsgaard, CEO, Bladt Industries A/S.*

### **The Wiking project**

The Wiking Offshore Wind Farm will consist of 70 wind turbines with a total capacity of 350 MW. Bladt Industries will provide 41 four-legged jacket structures including four piles for each jacket foundation.

The fabrication of the Wiking project will start up in the spring of 2015 at the Lindø facilities. The first jackets are planned to be delivered in the spring of 2016. The jacket foundations will be installed in water depths of up to 42 meters, each with a weight of approximately 600 tons and a footprint of 23x23 meters.

Iberdrola is one of the leading wind operators in the world.

"We look very much forward to working with Iberdrola on this very important project in the German Baltic Sea" says Jan Kjærsgaard.

### **Strong partner**

Besides being one of the clear market leaders within production of offshore monopile foundations and substations, Bladt has by this order also gained a leading position within jacket fabrication for the offshore wind business.
