Bladt Industries A/S invite EEW SPC onboard

Bladt Industries enters agreement with EEW SPC in Rostock, Germany, for the supply of monopiles to the foundations to DONG Energy's Gode Wind 1 + 2 offshore wind projects.

In November last year Bladt Industries could announce that they had signed a contract with DONG Energy for the 97 offshore XL Foundations for Gode Wind 1 + 2. As planned, Bladt Industries will start the fabrication of the XL foundations in the third quarter of this year.

As Bladt Industries have had a long term working relationship with DONG Energy, Bladt have also had a close cooperation with the German company EEW SPC for years. Previously Bladt and EEW SPC have worked closely together on the execution of Walney 2, Gwynt y Môr, London Array, Baltic 2 and Butendiek. The Gode Wind project is no exception. Bladt Industries have subcontracted the fabrication of the 97 monopiles to EEW SPC.

"We always seek to find the most optimized solution for our clients, and on this project it was a clear advantage in relation to secure the delivery on time, as well as for us, if we subcontracted the monopiles to the German company EEW SPC" says Division Manager Morten Mørk, Bladt Industries.

Bladt Industries will fabricate the 97 XL monopiles at EEW SPC's facilities in Rostock, Germany and the transmission pieces in Aalborg, Denmark.

„This is our first order for XL monopiles and it shows that our serious investments in building a new production hall for XL monopiles were the right decision. We look forward to doing another important project with Bladt Industries and are proud of, after having done the Walney projects for DONG Energy, working again for the market leader in the offshore wind business," says CEO Karl Klös-Hein, EEW SPC.

"Bladt Industries has used this set-up among others also for London Array, the world's biggest offshore wind farm, with great success. It shows that German companies are part of the international offshore wind business", says Trine Borum Bojsen, Managing Director for the German offshore wind business of DONG Energy. "Offshore wind as a technology plays a key role for the German energy transition and additionally it has great job creation and export potentials. German companies have a lot to offer and with the agreement for the supply of monopiles to our biggest offshore wind projects in Germany, we now see EEW as an important contributor bringing competences and experience to these projects."
