

# Offshore Foundations

The base for your success

www.bladt.dk

## Market leading experience

Since the very beginning of the offshore wind industry, Bladt Industries has been involved in the construction of foundations for offshore wind farms across Europe. From monopiles and transition pieces to XL foundations and jacket structures - we know our business and fabricate offshore foundations according to our clients' specifications.

We combine the knowledge and experience gained from 40 years in the offshore oil & gas sector with significant technical expertise to effectively manage projects and deliver outstanding structures for our clients in the wind energy sector.

## Optimal facilities – optimal solutions

Bladt Industries has an impressive track record managing large scale and innovative projects. With optimal rolling facilities and direct access to seaways, our facilities are ideally equipped and located for fabrication of large structures.

In the hands of expert welders and painters, our state-of-the-art equipment enables us to guarantee superior performance and high quality solutions. Flexible and adaptable, our production facilities and employees are always ready to meet the needs of our clients.

## Quality and cooperation is key

We deliver offshore foundations of the highest quality. Using our industry knowledge and flexible approach, we share our expertise when consulting with our clients – and we make it a priority to keep a steady dialogue and listen to our clients' needs and wishes.

## We provide the Bladt-team

We know that the final outcome is paramount to our clients' success. Delivering high quality foundations on time and within a safety conscious environment requires experienced project managers, state-of-the-art facilities and a team of highly skilled welders and painters – and this is exactly what Bladt Industries guarantees to provide.

## FACTS

- First foundation delivered in 2002
- More than 1300 foundations on our list of references
- 40 years of offshore know-how
- Facilities in Denmark, Germany and UK\*  
\*JV between EEW and Bladt Industries
- Excellent quay facilities with direct sea access

Quality is  
**everything**

## Jacket Foundations

**Welding steel pipes into complex jacket structures requires skills, knowledge and the right equipment. Since the 1970s, fabrication of jackets has been part of our core business and with more than four decades of experience, we offer unparalleled expertise in jacket structures.**

Our experience and know-how cover a variety of jacket structures such as tripods and four-legged structures, and we are experts in y-joint welding. With our flexible and adaptable facilities, we are able to deliver high-quality, fast-track fabrication of jackets for clients everywhere.

## Monopile Foundations

**Fabrication of foundations - from monopiles and transition pieces to XL-structures - is our core business. Over the years, we have transformed numerous clients' specifications into long-lasting offshore steel foundations and have accumulated unique technical expertise in this field.**

Since 2002, we have been involved in the fabrication of more than 1,300 foundations and have gained extensive experience with this process – and with fabrication and mounting of external platforms as well as mounting and installation of both static anodes and dynamic ICCP corrosion protection systems.

## Innovation

**Offshore foundations are our future and at Bladt, believe that developing new and innovative foundation types is an investment – in our clients, in the industry and ultimately in our own business.**

We have been involved in various ground-breaking foundation projects – from fabrication of a met mast and a twisted jacket to fabrication of a suction bucket jacket in 2014. We want to push the envelope in innovation and technology for the benefit of our clients.
