Individual solutions designed for the future

Shore-based facilities for ferry and ro-ro harbours

Bladt Industries is one of Scandinavia's leading suppliers of gangway facilities for walking passengers, linkspans for ferries and ro-ro ships, as well as other shore-to-ship installations for ferry, cargo and commercial harbours.

Based on our concepts and installation designs, we have delivered more than 70 installations over the past 25 years, whereof the main part is still in operation. We gather operation data which is included in the development of new installations and systems, and with our many years of experience, today, we are able to develop solutions for any type of vessel and facility location, as well as solutions adjusted for individual needs and wants.

Product range

Our product range, among others, covers:

- › Ramp and linkspan installations for cars, trailers and railway traffic
- › Gangway installations for passenger and cruise ships

- › Fender systems
- › Bunker facilities
- › Ferry berth and terminal buildings

We operate as total, main or partial supplier for projects.

With installations from Bladt Industries, you are secured optimal and fast traffic flow, a high degree of operation stability, a safe and simple operation, as well as solutions that can be delivered and installed at the shortest possible time and with consideration for existing ferry traffic.

Project organisation

Our team of engineers, technicians and project managers can handle all phases of projects from analysis and concept choices, to detailed project planning, fabrication, installation and initialisation, as well as the following service.

Pilot projects

We gladly take part and assist in pilot projects. We have the latest tools for analysing and processing relevant

harbour hydrography, hydrostatic vessel data, and for simulation and determination of traffic logistics from loading and unloading areas etc. to vessels.
